

AI document processing

Before the pipeline receives another file

From the field note "Your AI translation pipeline is losing context. Give every stage the same contract.".

The short version

- ◇ Resolve conflicts before translation; sending more files does not create a shared policy.
- ◇ Pin the source, resource contents, prompts, schemas and model settings to one run.
- ◇ Keep neighboring text as read-only context, then validate every stage before saving its result.

The checklist

- ☐ One accepted manifest identifies source, resource contents and stage contracts.
- ☐ Resource conflicts have an explicit resolution or block processing.
- ☐ Requested IDs are distinct from read-only context.
- ☐ Every stage validates before its result and checkpoint commit.
- ☐ Retries preserve the manifest; delivery follows the agreed approval policy.
